

Fall 2013 Final Report

Dear Producer,

We had a great turn out for our Fall 2013 efficiency test here at the Genetic Development Center. The Fall test has come to a conclusion and attached is the final performance report for the animals that were on test.

The attached Fall 2013 Final Report is a complete test report with off test weights, gains, fertility testing, and ultrasound data included. We had a total of 235 bulls and 84 heifers that completed the test. We are happy with the results and look forward to having all of you back for future test with us.

Our Summer 2014 test is just around the corner. We will receive cattle June 10-12, 2014 with Day 0 on July 1, 2014 and Day 112 on October 21, 2014. Eligible age ranges are calves born between September – December 2013.

-Fall 2013 Final Report key:

- Contemporary Group: Comparable groups based on gender, breed, age and weight
- IBW (lb): Initial body weight (Day 0), 11/1/2013
- FBW (lb): Final body weight (Day 112), 2/21/2014, **cattle with ** by the ranch name had FBWs taken on 1/10/14**
- FNL ADG: Final average daily gain (112 days), **cattle with ** by the ranch name had FNL ADGs on 1/10/14**
- Cattle with FBWs and FNL ADGs taken on 1/10/14 should not be compared to cattle that had FBWs and FNL ADGs taken on 2/21/14.
- ADG RAT: Average daily gain ratio, calculated within Contemporary Group and FBW dates
- WDA: Weight per day of age based on the date FBW was taken
- RFI: Residual Feed Intake, most negative number is most efficient
- Index Ranking: Feedlot profitability index that ranks bulls and heifers on ADG, RFI and FBW
 - 100 is the average for the contemporary group, with higher indexes indicating higher feedlot profitability.
 - ADG is weighted the most in the formula closely followed by RFI and then final body weight, which affects the index the least out of the three
 - The index relates ADG and RFI based on the animal's final body weight
 - This index helps take some of the confusion out of bulls that have a low RFI, but also have a low ADG and high feed conversions.
- SCR CIR: Scrotal circumference in cm. "-" scrotal measurement at a different facility
- Fertility Test: "P" Pass, "D" deferred, "-" tested at a different facility
- RMP Fat: Ultrasound Rump fat, some breeds do not use RMP FAT as shown on report
- RIB FAT: Ultrasound Back fat
- REA: Ultrasound Ribeye area
- REA RAT: Ribeye area ratio, calculated within Contemporary Group
- IMF: Ultrasound % Intramuscular fat, marbling
- IMF RAT: % Intramuscular fat ratio, calculated within Contemporary Group

From all of the staff here at the Genetic Development Center, we would like to thank each of you for your participation in our program. We look forward to working with you again in the future. If you have any questions or if there is anything that we here at the Genetic Development Center or Sexing Technologies can do to improve your program please give us a call or send an email. Also we would love your feedback based on you experience at the GDC.

Firmly In Him,
Ryan A. Doerner & Luke Bradford

Genetic™ Development Center
